AN OVERVIEW OF THE WEB BROWSER OUR WEB BROWSER IN GTK

The activity of using a third party library(Gtk) to program a web browser is a hectic activity which I find very interesting though.

PERSONAL ACHIEVEMENTS

Programing a web browser makes me open to the real world as I find myself competing with other web browsers inorder for me to produce a more efficient browser and also to solve the short comings of the other browser

This activity given to us by Mr. Ngatchu Damen has helped me very much in using a third party library and also increase my knowledge in Gtk. This work also made me to see the outside world in real life and also to slove the problems faced by individuals and also made me to think and reason in space.

Programing a web browser, got me really fillfiled because at least for onse i felt like i could do something which could help individuals and organisations

CONCLUSION

The activity really inspired me and the work was really a good one and I thank the lecturer(Ngatchu Damen) for such a wonderfull work. Promise to continue with this project basically to improve speed of the browser
