

Name:Kengne Arnould Franklin

Matricule: FE14A107

Course: System Programming

MY VIEW
CONCERNING THE BROWSER PROJECT
(BOLF)

Participating in the browser project exposed me some level of programming using third party libraries especially the gtk library. Although it was a tough task but as a team we came out with a browser worth wanting to see by others. During this task we faced challenges like enabling the browser to search online and also there was less time to finish the job but as a group we accomplished the job. It was very interesting working with an experience group leader with his experience in programming we made a worth looking browser .I personally think if we had more time we would have made a browser worth competing with browsers like mozilla, opera mini , chrome browser.The browser project is great for my own view and I will like that we will continuous with the same work.
