

MY VIEW ABOUT THE BOLF

The Bolf Browser is an interesting Browser to use. It is very Convenient to use for any kind of search. Since it is light, flexible, fast, provides room and takes internal care of any of the information given to it to provide the best and most accurate results. example. Depending on the type of information you give in the inputText , it does a selection and fixes it to get the final Url to search (try this on the search, facebook, facebook.com, <http://www.facebook.com>, www.facebook.com etc they all will take you to facebook) . It is Light ,flexible and fast because it is developed In the C Programming Language which is very close to Assembly Language.

Despite the fact that it provides the above mentioned, it is built to help ease and fasten the search of Entertainment information example Music ;further sub divided into Africa, Nigeria, Cameroon(Kamer) and Hiphop and R&B. Each having an Event to leads to the best site to find its information. This applies for Movies, Funny Movies, Games, Sport. When the mouse is passed over each widget, it tooltip the the use of that widget. This ease the use of the Browser making it very friendly and user Convenient. You can read more on its Home page.

For me, this is a job well done if continued, in less than no time, it will stand to out as the most reliable entertainment browser since non exist exist already.

As a negative point for the Browser, the widgets Have same images for eternity. If we can make the pictures to be dynamic and automatically gotten and verified as the best at the instant from the Internet for that search, it will be better. Also if the websites can change depending on some special algorithm to always give Users the best that they need.

The browser is good be need to be improved upon.

The Development of this Browser help me to learn a load.

It helped and gave me the base and courage never to e afraid of a project without trying.

Within its development I saw the power of C applications with Graphics.Example,I did a search with it and the same search with Iceweasel and it seems faster. Since Iceweasel is mostly in Php and more advanced Language. But little part is also done in C.

It also help me to learn how to use third party Libraries with a Language like C. I used GTK and Webkit.

`#include <gtk/gtk.h>`
and `#include <webkit/webkit.h>` in its development.

It also help increase my experience and knowledge of leading and Managing a project.

It also served as a bridge for me to learn GIMP which I used to create my slide shows.

In fact it was a good experience working on such a project I learned much about software development.

Thanks to M r Damens Gatchu for providing such an opportunity.
